

The Deception that Breaks My Heart

Another Look at the PCR Test

Dr. Kary Mullis unfortunately died in August of 2019, a few months before his Nobel Prize winning invention/discovery of the PCR test would be used to deliver “positive” tests to the unsuspecting world of Mankind.

“With PCR, if you do it well, you can find almost anything in almost anybody. It starts making you believe in the Buddhist notion that everything is contained in everything else. Because if you can amplify one single molecule to something you can really measure, which PCR can do, then there [are] very few molecules that you...don’t have one single one of them in your body.” These are the words of Dr. Kary Mullis discussing his 1993 Nobel Prize winning PCR test.

You can find almost anything in almost anybody. Essentially, you can find any virus in anybody. Mullis explained that the only real “misuse” of the PCR test is the ***misinterpretation*** of it’s results.

“It allows you to take a very miniscule amount of anything and make it measurable and then talk about it at meetings and stuff like it is important” Mullis stated, “you see, that’s not a misuse it’s sort of just a misinterpretation”.

“An organism’s genome is stored inside DNA molecules, but analyzing this genetic information requires quite a large amount of DNA. In 1985, Kary Mullis invented the process known as polymerase chain reaction (PCR), in which a small amount of DNA can be copied in large quantities over a short period of time. By applying heat, the DNA molecule’s two strands are separated and the DNA building blocks that have been added are bonded to each strand. With the help of the enzyme DNA polymerase, new DNA chains are formed and the process can then be repeated. PCR has been of major importance in both medical research and forensic science.” This quote is taken directly from nobelprize.org -- it is of major importance in research and forensic science. Not in diagnostics.

Dr. Kary Mullis was the president of the University of South Carolina and there is an interview where he talks about inviting Dr. Anthony Fauci to debate him in front of the student body. Fauci declined.

Mullis stated “These guys like Fauci get up and start talking and he doesn’t know anything really about anything, and I would say that to his face. Nothing. The man thinks you can take a blood sample and stick it in an electron microscope and if it’s got a virus in there, you’ll know it. He doesn’t understand electron microscopy and he doesn’t understand medicine and he should not be in a position like he’s in. Most of those guys up there on the top are just total administrative people and they don’t know anything about the body.” Mullis went on to say, “Those guys have got an agenda which is not what we would like them to have, being that we pay for them to take care of our health in some way. They have a personal kind of agenda. They make up their own rules as they go; they change them when they want to. And they are smug — like Tony Fauci does not mind going on television in front of the people who pay his salary and lie directly into the camera.”

Mullis was notoriously outspoken, eccentric and even...ah...proud. He was a smart man who believed he was a smarter man than most...but, he did win a Nobel Prize. Even though he wasn’t exactly the most “feel good” kind of honesty all of the time, his words regarding his PCR Test ring with validity.

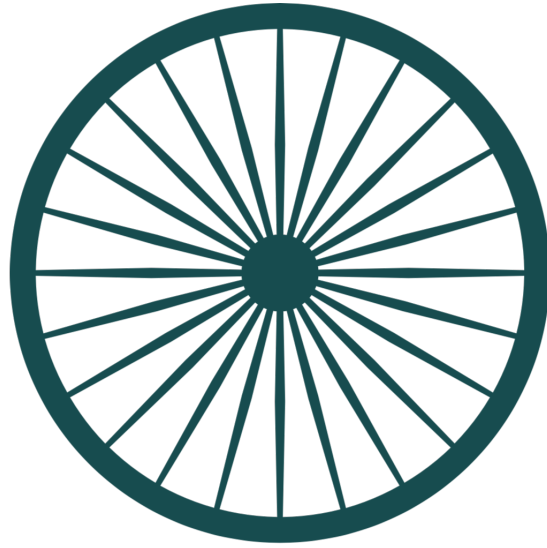

Mullis may have stated that you cannot misuse the PCR Test, but he did not live long enough to witness “misinterpretations” being presented as positive tests again and again by individuals who should know better and who are, by the definition of their jobs, public servants. There are class action lawsuits that have been launched with regards to PCR tests that are absent from media rhetoric. In the summer of 2020, judges in Portugal stated that “this test is, in itself, unable to determine, beyond reasonable doubt, that such positivity corresponds, in fact, to a person’s infection with the SARS-CoV-2 virus”. Now having read the inventors words, we can appreciate that this is because you can “find almost anything in almost anybody”. In any sample of anything, you will likely find anything.

This is deceit against our Collective mind.

The PCR Test is remarkable because it, in itself, has the capacity to reframe our concept of existence. Eastern Science and Western Science. All of life contained within itself. This is perhaps the darkest part of the deception. What we have here is a discovery capable of shifting our entire paradigm if it were to be celebrated or explored for what its true potential is.

Because you see. Life is Death. And Death gives way to Life. The only promise that will be kept for each and every one of us is the promise of the return to where we came. The great Mystery of Life can only be answered in Death. Everything else is speculation.

The deliberate misinterpretation of the PCR Test alters the course of the Collective understanding of Life itself.

We are Oneness.
